

Yuhong is a talented and skilled student from Carnegie Mellon University School of Computer Science. His study focuses on Software Engineering, Networked Systems and Data Analytics. With years of study, he is proficient in several coding languages like Java and C, and has experienced in building multiple products like File-Caching proxy and e-commerce website deployed on AWS. Also, his leadership and communication skills are assets while working in team. He once successfully led a team of 4 to build a ticket data analytics platform for Highmark Inc., a non-profit healthcare company. I believe he will be a strong candidate for this position.

I have studied Computer Science for over 5 years and always wanted to be a Software Developer. I believe Software will provide enormous power to all existing industries and I want to be part of this evolutionary growth. So I focuses my study on Software Engineering, Networked Systems and Data Analytics. With years of study, I'm proficient with coding languages like Java and C, and has experienced in building multiple products like e-commerce website deployed on AWS and File-Caching proxy. Moreover, I have successfully led a team of 4 to build a ticket data analytics platform for Highmark Inc., a non-profit healthcare company. I believe my coding, leadership and communication skills are essential for my success as a Software Developer.
